Infuse ICE

Non-Invasive | Effective | Safe

The most
advanced
& efficient device
for facial contouring
& trans epidermal
delivery

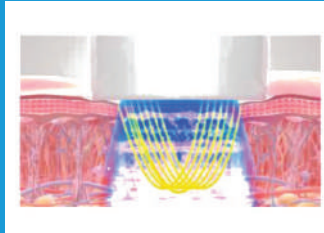

One solution. Many possibilities!

The InfuseICE (CRYO Transepidermal Delivery system) is a non-invasive procedure for the delivery of cosmetics or growth factors, combining deep cell penetration with the CRYO procedure, i.e. cooling. Infuse ICE is the perfect synergy of Cryo Electroporation & Cryo Radio Frequency

How it Works?

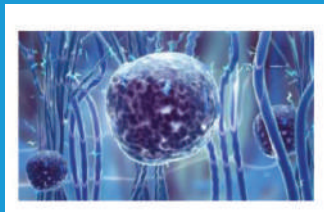

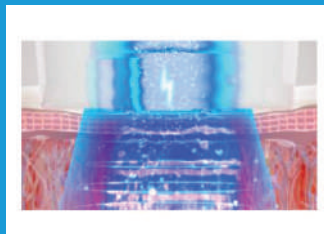

Step 1

CRYO RF: The effect obtained by using the Infuse ICE head stimulates the tissue and stimulates the production of collagen and elastin, thanks to which the skin acquires an immediate lifting effect.

Step 3

Electroporation CYRO : a powerful cooling function that improves cell activity and increases the penetration rate of active substances.

Step 2

Patented microparticulate technology SkinINfill® is a high-protein carrier substance that is placed inside the Infuse ICE applicator .

Step 4

Nanoparticles penetrate the layers of the skin to provide regeneration and treatment.
