PULSED ELECTRO MAGNETIC WAVE

Intensive supramaximal contractions stimulate muscles' response with a deep remodeling of its inner structure, i.e., the growth of myofibrils (muscle hypertrophy) and creation of new protein strands and muscle fiber (muscle hyperplasia). The process results in increased muscle density and volume.

■ TO GET AN ATTRACTIVE BODY

■ YOU NEED TO BUILD MUSCLE

PEMWAVE PLUS
Pelvic Health

PEMWAVE
Muscle Building

1 Myofibrillars loosen

As age grows, Myofibrillars are loose and fragile because of pregnancy, fat accumulation, lack of exercise and other factors. People become fatter and flabbier.

2 Myofibrillars break

The equipment interact with muscle neurons to induce supra maximal muscle contractions. In the process of continuous muscle contractions, part of myofibrillars are gradually broken to cause muscle self-repair.

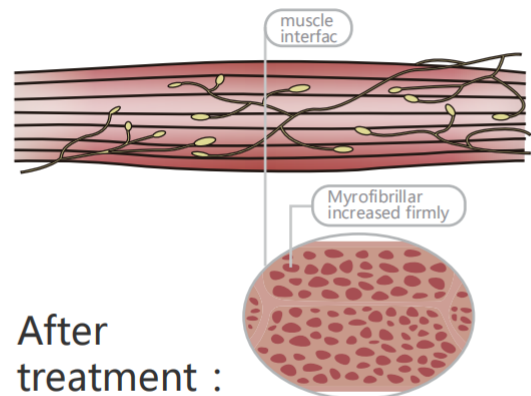

3 Myofibrillars repair

After treatment, Myofibrillars tend to be strong and tight. Muscle becomes firm and elastic. It responds with a deep remodeling of inner structure that results in muscle building and growth and body shaping.

Before
treatment :

Muscle is thin and the circumference of muscle is short. Myofibrillar is loose with small density.

After
treatment :

Muscle is strong and the circumference of muscle is long. Myofibrillar is strengthened and increased with large density.

CAVITATION:

Reduces fat cell volume in stubborn areas.

RADIOFREQUENCY:

Leads to collagen remodeling and skin tightening.

DYNAMIC MUSCLE ACTIVATION:

electrical current stimulation for toning and shaping of muscle groups.

PROTECTIVE COOLING:

For the prevention of epidermal damage and the optimization of comfort.

DERMOLIFT DUO

SKIN TIGHTENING + MUSCLE TIGHTENING + PROTECTIVE COOLING

Combination of protective cooling RF, leads to collagen remodeling and skin tightening followed by dynamic muscle stimulation, leading to lifting and toning of the smas layer.

Significantly reduces wrinkles, promotes targeted collagen production in the dermis, and smooths the complexion.
